

You Now Have The Power To Prevent Outages

Our platform covers every aspect of your IT event management workflow: accurately detecting anomalies, automatically surfacing important events from noise, alerting Ops teams to potential crashes, reducing MTTD and MTTR, and freeing people to focus on mission-critical tasks.

EVENT INGESTION

Observes and analyzes data from multiple sources

NOISE REDUCTION

Identifies and surfaces relevant events to reduce noise

CORRELATION

Proactively detects actionable incidents with real-time AI and machine learning

CAUSALITY

Analyzes probable root cause by diagnosing and identifying the source of incidents

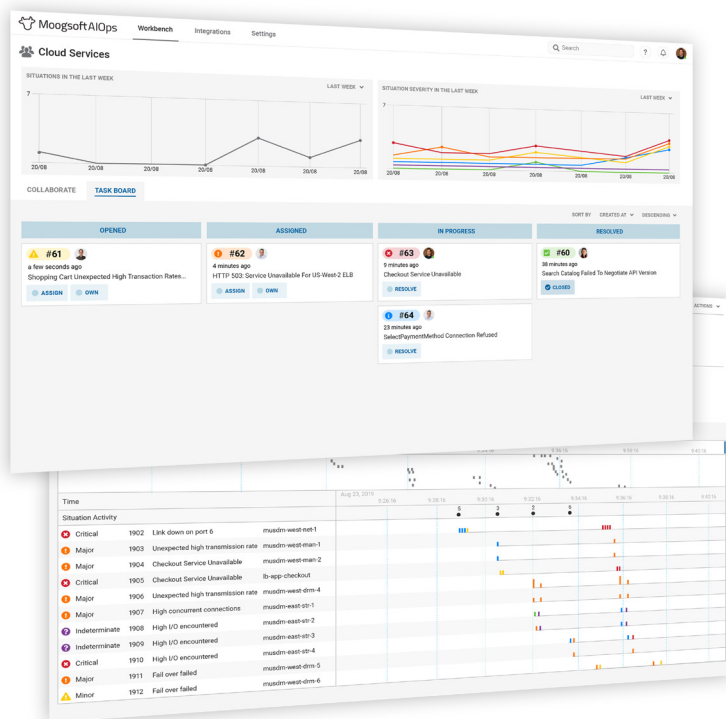

COLLABORATION

Provides collaborative workflow for resolution in our Situation Room

KNOWLEDGE RECYCLE

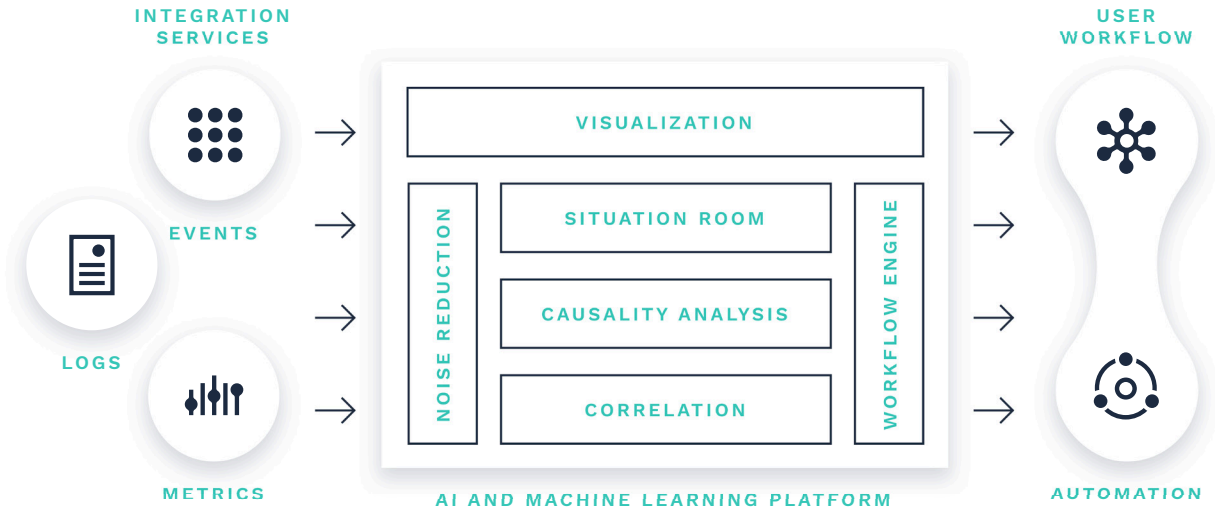

Learns from the past to immediately solve repeat incidents

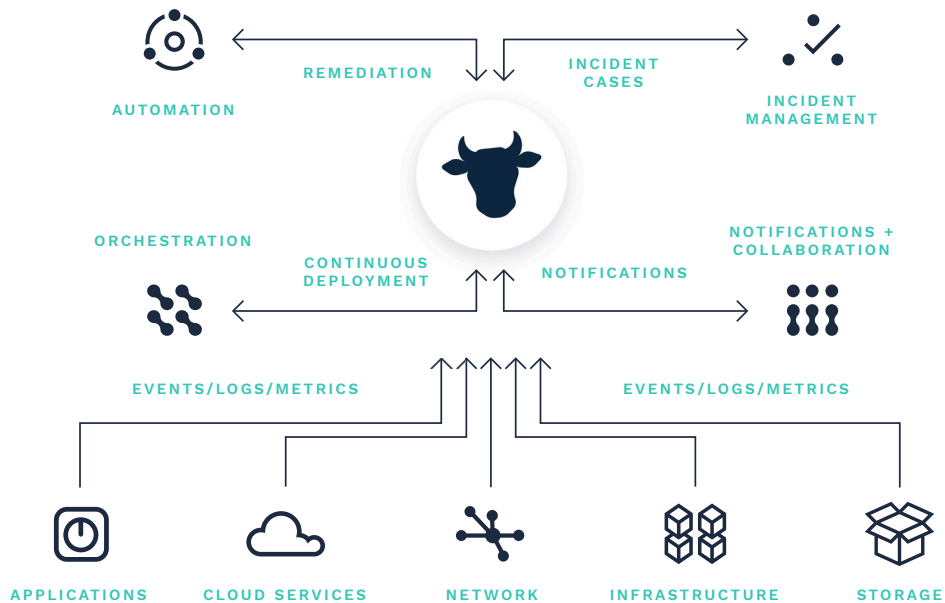

Value & Benefits

- Ingests data from all your application, infrastructure, CI/CD and cloud stacks
- Correlates meaningful alerts into actionable incidents
- Provides unified visibility with preventative insights
- Allows you to collaborate with any team and simplify your workflow
- Captures and reuses knowledge including previous resolution steps taken
